

## Under utilization of post natal services

By Charles Dickens Mugisha

LAP Lambert Academic Publishing. Taschenbuch. Book Condition: Neu. 220x150x mm. Neuware - Postnatal care is a service rendered to a mother and a child (new born) from birth to 42 days with an aim of reducing morbidity and mortality. About 3-4 million new born dies within the first week of life. The risk of death is highest in the developing world (WHO 2006). The postnatal period is a vulnerable time for both mothers and newborn. 61% of maternal deaths occur during the first week after birth and nearly half of those take place during the first day after delivery (population data sheet 2003). A cross sectional descriptive study was carried out in Rubaya sub-county to establish the magnitude and factors influencing low utilization of post natal care services. Data was collected from 140 respondents. The study findings revealed that 72% of the respondents were knowledgeable but only 25% utilized the services. It was also discovered that the hindering factors were: Distance, education, occupation and economic status. Conclusively, information education and communication, advocacy on education for all and continuous updating /training of health workers would be reliable strategies to improve the situation 68 pp. Englisch.
